what skills did you learn aside from technical skills?

I have gained the ability to efficiently communicate and work with people around me. The working environment in Dynamik Technologies has exposed me on how different teams collaborate in a project. I learned how to delegate work and plan ahead. Additionally, being under a great supervisor has made me learn the importance of having good leadership skills. He has shown me how crucial it is to be a good listener and have good problem-solving skills.

Other than that, participating in this program has helped me gain good time management. I find it important to balance my time between work and keeping up with my school studies. I find it crucial to keep track of my tasks and prioritise accordingly, this way I would not neglect any work. Moreover, planning ahead helps me spread my task evenly over time, which prevents me from overworking or overwhelming myself.

where do you see yourself in 5 years?

I see myself contributing more to the company and become far more skilled than I currently am.
